Re: 12-Meter Site Safety Inspection
November 28, 2007

SUMMARY

A site safety inspection was made at the 12-Meter Telescope on November 28, 2007 by Dale Webb and George Tietz. Of the seven open items at the last inspection, six have been corrected or are no longer to be counted as open. The two items on the operator dorm are being removed at this time because I have been told it is no longer occupied. If it will be used in the future, the fire extinguisher or the table must be moved and the area should have new carpet or remove the rest of the tack strips from the floor. The last open item is the 40 or so batteries on the loading dock that should be removed before they crack open and start leaking acid all over. Now there is other junk on the dock including compressors and tanks which should also be cleaned up.

The two new items noted at this inspection are a large puddle of water on the floor in the electronics lab (slipping hazard), apparently caused by a backed up drain, and the seat on the outside fork lift should be recovered or replaced so that the operator can sit comfortably while operating the equipment.

Since the last inspection, all of the fire extinguishers and signage have been upgraded and inspected and as usual the whole facility looked clean and well maintained. The safety inspection of the crane had been done on schedule and it was sporting a new paint job and a current certification sticker....Great Job George!!!!

Inspection Results of November, 2007 shown in bold

Item Noted	Abatement Date
New item: Emergency light over sink behind control room not operating	Done
New item: Emergency light in clean room of lab not operating	Done
Relocate fire extinguisher in operator dorm, or relocate table, remove remaining tack strips from floor	Done; see note
Install 3 individual feeds for machines that are currently in series from same feed. This is the same as of January. Could the sander be plugged in the wall behind it and the extension cord on the floor be removed? Or could the lathe be moved to the space and power of the old lathe? Or both.	Done; Sander moved
Properly dispose of the 40 or so batteries on the loading dock near the electronics lab	Same
No fire extinguisher in mg room Fire extinguisher on floor in George's shop	Done
Wire protruding from wall in breezeway	Done
Water pooled on floor in electronics lab----plugged drain	
Seat on Fork Lift should be repaired or replaced
