WEATHER INFO: Winds-> 15.1 mph @ 28, 15.9 C, 97.9% RH, 615.7 Torr, mostly clear

1. Tom, Sean, Ron, Kevin, Amy and Mike are on site.
2. Sean brought up a Honda GXV 160 ("widowmaker") Augur from Home Depot.
3. With Fred Wortman and Jose Montes, we lifted the KP backhoe out of the dome. Jose used the front loader to smooth out the dirt we've been dumping into the ditch adjacent to the north side of the dome.
4. Per Warren Davison's recommendation, we used the augur to drill some more test holes in the floor of the excavation in search of rock. Only one of the 5 holes (near due east) hit solid rock about 1 foot further down. The others all bottomed out to the limit of the augur. We used our hand tools to continue excavating these areas.
5. Sean bolted the safety-rail posts to the floor.
6. The Astronomy Camp counselors appear to vacated the dorm. We have not gotten the keys back yet.
7. Removed and replaced all three water filters.
